

We think an EMR should adapt to you. Not the other way around.

It took a doctor's touch to design OneTouch EMR. Smart Thinking.

FIVE-STAR RAVES IN THE APPLE APP STORE

★★★★★ *Finally, a web-based, physician developed system that provides a simple user-friendly format for both progressive traditional practices, as well as non-traditional mobile care practices. Responsive and competent customer support and reasonable pricing just add to my satisfaction.*

★★★★★ *Holy customizable! This template system allows me to customize my exam 100% to what I am accustomed to.*

★★★★★ *One touch is a very easy software to learn and has everything that I need to go through my Encounters and Chart quickly. I really enjoy the way the system may be customized for each user and how I am able to use my iPad anywhere I may be to access the database and work. Thanks to OneTouch it has changed my productivity and my life.*

★★★★★ *Overall, I haven't found a more intuitive and straightforward EMR. I have tried several over the years and none of them were structured to document a patient visit the way doctors learned to interview and examine a patient. For those who don't always want to touch a button to enter data, Dragon Dictation works seamlessly for most data fields.*

★★★★★ *Other EMRs also don't have such a clean, elegant, and easy to use design. This is a very affordable system and the company can have you up and running within days. The subscriptions are monthly and it's not a huge investment to start using like other systems. I can't recommend it enough!*

SMART. LIKE YOU.

OneTouch developed an EMR solution that is part of patient care—not a partition between you and your patients.

Smart Move.

FAMILIAR

OneTouch EMR was designed based on classic healthcare workflow, unlike most EMRs which are cumbersome and slow. Since a doctor designed OneTouch, **the workflow mimics the way physicians think.** The familiar chart-based system makes sense from the moment you login. You'll instinctively understand how to navigate and find what you need.

FASTER

OneTouch EMR is **faster and easier to use than any other EMR solution.** You can document quickly during the patient visit...not on nights and weekends. The Patient Portal allows patients to populate their history, meds and allergies before the visit even begins. Import past notes into the current visit, instead of recreating them. Access all patient data without leaving the Encounter. Use the integrated fax instead of time-wasting scanning and uploading.

FLEXIBLE

OneTouch EMR is **easily and quickly modified to accommodate the requirements of your specialty** and your individual preferences. Customize default encounter notes by appointment type. Touch, type, or use the integrated Dragon Medical dictation to document using your preferred method. Easily customizable forms, templates, and macros allow you to speed through your visits.

FORWARD LOOKING

OneTouch EMR is cloud-based, eliminating the need for expensive hardware. This approach also gives us the ability to quickly adapt & deliver new features via automatic updates. We are **ICD-10 ready, Meaningful Use I and II certified, HIPAA compliant**, and built with military-level encryption to secure your data. Ready for the future, today. Very smart, indeed.

OneTouch EMR stores your data in the cloud, giving you freedom to work from anywhere using an iPad, tablet, laptop, or desktop PC. We are interfaced with most PM/billing systems, labs, and we offer ePrescribing.

Our integrated fax removes the hassle of scanning & uploading documents and gives you a virtually paperless office. The built-in E&M Helper minimizes under-coding and maximizes reimbursements.

Requiring only a month-to-month contract, OneTouch EMR is an affordable monthly subscription rather than a costly system you purchase. It requires far less startup and transition expense than in-house systems. Tiered subscription choices allow you to select the level that best suits your practice needs & budget.

OneTouch techs can even migrate all of the patient data from your existing PM/EMR into OneTouch EMR quickly, accurately, and completely.

With enterprise-level features, OneTouch caters to large, multi-location facilities while also being affordable enough for medium and small practices. If you need an EMR with mobile capabilities, or one that is ideal for multi-specialty practices, OneTouch EMR is the smart solution.
